

Rent Dynamics is an emerging software and technology company in the multi-family housing industry experiencing strong growth. We are always looking for driven and talented individuals who are looking to grow their careers in a multi-billion dollar industry. We would love to have you come and visit us in our brand new building in Logan (in the Riverwoods) to get a feel for who we are and what we do! We are looking to fill the following positions over the coming months:

SALES AND MARKETING

Whether in-office or remote, Rent Dynamics **Sales Professionals** work closely with Management to promote growth and develop additional revenue opportunities through prospecting, networking and creative thinking. Self-driven top performers who are also coachable are ideal for this role. **Marketing Gurus** are needed to help improve the Rent Dynamics brand and provide competitive differentiation in the marketplace.

CLIENT SERVICES

Our Client Services team is growing rapidly to meet the demands of our increasing client base. **Account Managers** head up our ongoing relationship with clients and focus on all elements tied to growth and retention. **Technical Support Staff** are the first-responders who require great interpersonal skills coupled with technical know-how. **Implementation Specialists** assist with the onboarding of new clients to ensure that integrations and feature sets are fully functional. **Client Trainers** help our clients maximize their experience with our products in order to receive the most value from them. **Customer Service Team Members** provide information and assistance to residents from all over the country.

DEVELOPMENT

To keep Rent Dynamics ahead of the technological curve we are always seeking talented developers to join our team. We utilize a cutting edge technology stack to ensure scalability, flexibility and efficiency within our development teams. **Software Developers** are the foundation of this department by adding new features for clients and enhancing our existing codebase, as well as troubleshooting and diagnosing day to day issues within our applications. **Software Architects** focus on scalability and future-proofing our applications. **Quality Assurance** positions are critical in finding and preventing bugs from being released into production. They work closely with both the Client Services and Development departments to reproduce and resolve any issues found in the application. **Data Scientists** will become a key position in order

to take advantage of the data we collect. By analyzing and utilizing machine learning tools we can spur our data into action.
